Enterprise Technical SME & Lead

Vissat Solutions – Herndon, VA

Job description

Job Summary
We are seeking a highly skilled and motivated Enterprise Technical SME & Lead to join our dynamic team. The ideal candidate will possess a strong technical knowledge and demonstrate exceptional leadership abilities. As a Technical SME & Lead, you will oversee technical projects, mentor team members, and ensure the successful execution of innovative solutions that align with our organizational goals.

Responsibilities

- Collaborate with different business functions to get what the team needs to move forward.

- Ensure the backlog is fleshed out for the next development iteration and high-fidelity designs of a particular feature are developed.

- Collaborate with Operations to ensure the developers have the right hardware and permissions to get their job done.

- Assess and manage the technical debt in effective ways to minimize accumulation.

- Ensure the backlog always has enough work for at least one to two iterations out.

- Refine the backlog daily, look for how to break down larger tasks into smaller ones and look for task dependencies.

- Break down tasks based on how complex they are to the developers on the team.

- Check on the status of a task; and guide team and support team members in removing obstacles and taking corrective action where necessary.

- Oversee QA of code review tasks and ensure proper code reviews are done by the developers and meets expected quality and coding standards.

- Groom and mentor the developers on their team, provide feedback on their work frequently, and encourage and promote best engineering practices.

Requirements

- Minimum of 10 years of experience in Agile software development to include microservices architecture using open-source Java technology.

- Minimum of 5 years of experience with designing and developing complex software systems on a virtualized cloud environment such as Azure.

- Formal training such as a Bachelor of Science degree in Computer Science preferred.

- Minimum of 2 years of experience developing and deploying microservices in a cloud environment preferred.

- Minimum of 3 years of experience in DevOps and Continuous Integration/Continuous Delivery (CI/CD) concept using tools such as Jenkins, GitHub, Docker, Kubernetes, and testing tools such as SonarQube, JMeter.

- Minimum of 3 years of experience leading multi-person technical tasks.

- Demonstrated experience delivering Agile software solutions using best practices such as Test- Driven Development (TDD) or Adaptable Software Design.

- Exceptional verbal and written communication skills to effectively present strategies and solutions; and facilitate communication and collaboration with business stakeholders, ACIOs and customers.
